(1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at the Roswell Park Cancer Institute
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats, all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Actual start of this clone is at base position 1 of RP11-719M18; actual end is at base position 190122 of RP11-719M18.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The LGR4, LGR5 and LGR7 proteins are used to identify ligands for the receptor. The polypeptides and/or polynucleotides are also useful for homologous or related genes, producing compositions that modulate the expression or function of the receptors, gene therapy, mapping functional regions of the receptors, studying associated physiological pathways, in vivo prophylactic and therapeutic purposes, as immunogens for producing antibodies, and for identifying biologically active agents. The polypeptides contain a G-protein coupled seven transmembrane region and a leucine rich repeat extracellular domain. These regions capture and facilitate optimal orientation of its ligand. The proteins are also expressed in diverse tissues.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim

The LGR4, LGR5 and LGR7 proteins are used to identify ligands for the receptor. The polypeptides and/or polynucleotides are also useful for homologous or related genes, producing compositions that modulate the expression or function of the receptors, gene therapy, mapping functional regions of the receptors, studying associated physiological pathways, in vivo prophylactic and therapeutic purposes, as immunogens for producing antibodies, and for identifying biologically active agents. The polypeptides contain a G-protein coupled seven transmembrane region and a leucine rich repeat extracellular domain. These regions capture and facilitate optimal orientation of its ligand. The proteins are also expressed in diverse tissues.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 4;

The invention provides human G protein coupled protein receptor (HGPRP) polypeptides and polynucleotides encoding them. The polypeptides can be produced by standard recombinant methodology. The polynucleotides and polypeptides may be used in the prevention, treatment and diagnosis of diseases associated with their inappropriate expression. Diseases that can be treated are cell proliferative disorders (e.g. arteriosclerosis, atherosclerosis and hepatitis), cancers (e.g. leukemia, melanomas and adenocarcinoma), immune disorders (e.g. anemia, asthma and Crohn's disease) and neurological disorders (e.g. epilepsy, Alzheimer's disease and Parkinson's disease). The anti-hGPCR antibodies may also be used as diagnostic agents for detecting the presence of HGPRP polypeptides in samples (e.g. by enzyme linked immunosorbant assay (ELISA)). Sequences AA290521-526 represent cDNA fragments encoding the HGPRP polypeptides

                                                                                                                                                                                                                                                                                                                                                                                                protein"
```

Claim 22; Page 15-16; 215pp; English.

The invention relates to human G protein-coupled receptor (GPCR) and their corresponding DNA molecules. GPCR is also referred as seven transmembrane receptor. G protein-coupled receptor protein is useful for treating neurological disorder, particularly schizophrenia. GPCR protein is also useful for identifying compounds useful for treating schizophrenia. These compounds are also useful for treating schizophrenia. These compounds are also useful for treating other neurological and psychiatric diseases, e.g. depression, anxiety, bipolar disease, affective disorders, attention deficit hyperactivity disorder/attention deficit disorder, epilepsy, neuritis, neurasthenia, neuropathy, neurosis, Alzheimer's disease, Parkinson's disease, migraine and senile dementia. The invention also provides genetic screening procedures that entail analysing a person's genome with respect to GPCR. The vectors are uigraine and senile
g procedures that

                            Note: The sequence data for this patent did not form printed specification, but was obtained in electronic from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                         The invention relates to novel genes (AAI99548-AAI99604) and proteins (AAM9936-AAM99984) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification.
                                                                                                                                                                                                                                                                                                                     Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Rosen

                                                                                                                                 밁
                                                                                                                                                                    Ωy
                                                                                                                                                                                                               뫄
                                                                                                                                                                                                                                                   QΥ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to novel genes (AAL34669-AAL37666) and proteins (ABB03087-ABB04109) associated with the musculoskeletal system useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and cother cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune gastrointestinal tract, liver, lung, or urogenital; (b) immune concers e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, colleges, the correction of the concers such as myocardial ischaemias; (d) wound (c) cardiovascular disorders such as myocardial ischaemias; (d) wound be concerned to the concerned concerned to the concerned con

CC sequence tags (sESTS), isolated from human, mouse, chicken and rat tissue sources. The sESTs can have a range of activities depending on the tissues they were isolated from. The activities include: chemotactic; proliferative; immunomodulatory; haematopoletic; chemotactic; antibacterial; antifungal; antiviral; antifinflammatory; cc chemokinetic; antiparkinsonian; antipsoriatic; cerebroprotective; cc antiasthmatic; vulnerary; antifucer; osteopathic; neuroprotective; cc nootropic; antiparkinsonian; antipsoriatic; cerebroprotective; cc anticonvulsant; and antidepressant. The sESTs can be used for gene criterapy and in vaccines. The sESTs are useful as probes for the correspond to the sESTs. Proteins encoded by the sESTs care useful in assays for determining biological activity and raising care useful in assays for determining biological activity and raising care useful in assays for determining biological activity and raising contibodies. They may be useful for treatment of autoimmune disorders (multiple sclerosis, insulin dependent diabetes), allergic conditions costeoparthritis, central nervous system disorders (Alzheimer's, Parkinson's, Huntington's disease, stroke), coagulation cdisorders (haemophilla, thrombosis), inflammatory disorders (Crohn's Cdisease), tumours, bacterial, fungal or viral infections, depression and corriasis. AAA45926 to AAA45931 represent linker variants which are given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAA43426

CC (AAM99936-AAM99984) useful for preventing, treating or ameliorating CC medical conditions e.g. by protein or gene therapy. The genes are consisted from a range of human tissues disclosed in the specification. CC The nucleic acids, proteins, antibodies and (ant)agonists are useful CC in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast CC and ovarian cancer and other cancers of the adrenal gland, bone, bone CC marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune CC disease, multiple sclerosis, rheumatoid arthritis and ulcerative CC colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and cepilepsy; and (f) infectious diseases such as viral, bacterial, fungal CC Note: The senuence data for this

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      uterine motility-association polypeptides (AAU18094-AAU18152), and cDNA and genomic sequences encoding for these polypeptides. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of diseases associated with uterine motility such as pregnancy and labour, and menstrual disorders. The polynucleotide sequences of the invention are also useful in gene therapy. AAS28936-AAS28994 represent cDNA sequences encoding for novel human uterine motility-association polypeptides.

Note: The sequence data for this patent did not form part of the pr specification, but was obtained in electronic format directly from at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequences AAS29511-AAS29736 represent cDNA molecules, which encode the endocrine polypeptides of the invention. Endocrine polypeptides and their associated polynucleotides of the invention are useful in the diagnosis, treatment and prevention of various types of disorders in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. A pathological condition can be determined by determining the presence or absence of a mutation in an endocrine polynucleotide. The treatable disorders include autoimmune diseases such as rheumatoid arthritis, hyperproliferative disorders such as neoplasms of the breast or liver, cardiovascular disorders such as cardiac arrest, cerebrovascular fundamental process such as cardiac arrest.
                                                                                                                                                                                                                                                                      Alzheimer's disease, infections caused by bacteria, viruses and fungi, ocular disorders such as corneal infection, endocrine disorders such as premature labour and infertility, gastrointestinal disorders such as Crohn's disease, renal disorders such as glomerulonephritis and respiratory disorders such as asthma. The polypeptides can also be used to aid wound healing, to prevent skin aging due to sumburn, to maintain organs before transplantation, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                        1744
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    immune system disorders, muscular disorders, representational disorders gastrointestinal disorders, pulmonary disorders, cardiovascular disorders and renal disorders. The polynucleotide sequences of the invention are also useful in gene therapy. AAS34767-AAS35050 represent CDNA sequences encoding for the novel human neoplastic disease associated polypeptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to the isolation of novel human neoplastic disease associated polypeptides (AMU21568-AAU21851), and cDNA and DNA sequences encoding for these polypeptides. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of disorders involving neoplastic disease such as hyperproliterative disorders (e.g. leukaemia, bone cancer, bladder cancer, brain stem glioma, adult liver cancer, childhood cerebellar astrocytoma, or Hodgkin's lymphoma). The sequences of the invention may also be useful for treating other disorders such as neural disorders, immune system disorders, muscular disorders, reproductive disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1984
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1864
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1744
